PROFESSIONAL SUMMARY

Motivated Junior Full-Stack Developer and Software Engineering student with practical experience developing web application projects using HTML, CSS, JavaScript, PHP, and MySQL. Familiar with responsive interface development, database design, API integration, version control, and web application deployment. Interested in building reliable, user-centered applications while continuously improving software development, debugging, and problem-solving skills. Seeking a junior full-stack developer position or internship to contribute to real-world projects and grow within a collaborative development team.

TECHNICAL SKILLS

Frontend Development

- HTML5, CSS3, JavaScript (ES6+)
- Responsive and mobile-first web design
- DOM manipulation and form validation
- UI implementation and user experience fundamentals

Backend Development

- PHP
- REST API integration
- Server-side validation and application logic

Databases

- MySQL
- SQL queries and relational database fundamentals
- Database design and CRUD operations
- Supabase fundamentals

Tools and Deployment

- Git and GitHub
- Visual Studio Code
- XAMPP and phpMyAdmin
- Vercel and Render
- Browser developer tools and debugging

PROJECT EXPERIENCE

Flocq — Web Application

Full-Stack Development Project

- Worked on developing a web application with frontend and backend components.
- Integrated frontend functionality with backend services using API requests.
- Configured application deployment using Vercel and Render.
- Troubleshot application configuration, deployment, and frontend-backend communication issues.
- Used GitHub to manage source code and development changes.

Technologies: HTML, CSS, JavaScript, Node.js, REST APIs, Git, GitHub, Vercel, Render.

Pay-Link — Task Management Platform

Full-Stack Application Concept

- Designed a platform concept connecting employers and employees through task assignment and validation.
- Planned user interfaces and workflows for different account roles.
- Defined database requirements for users, tasks, and task status management.
- Explored frontend and backend integration using PHP and MySQL.

Technologies: HTML5, CSS3, JavaScript, PHP, MySQL.
